What Brain Research Is Telling Us About Teaching Adolescents

9-14 Year Olds

Presenters: Susie Girardin

Educators in this workshop will not only learn about their own brain's inner workings, they will learn how to organize their instruction, curriculum and assessment according to recent research about the young adolescent brain. If we understand what's happening in our students' brains we are more apt to provide the necessary teaching and learning pathways to increased success in the classroom.

Participants will experience many configurations, tools and strategies they can use in their own schools and classrooms.

Date: October 6, 2015

Time: 9:00-3:00

Place: 2 Prospect St, Montpelier, VT

Cost: \$150 (lunch on your own)
